**Professional Summary**

Keith Bishop is President and Founder of Islands By Design (IBD), an applied science, engineering and technology firm specializing in a wide range of consulting services within the marine and terrestrial environments.

A professional with over thirty years experience in project management consulting, Mr. Bishop has more than twenty years of experience as a local environmental consultant in the Caribbean, conducting environmental impact assessments. To date, Mr. Bishop has performed environmental impact assessments and has done environmental planning and management on over three hundred and fifty projects ranging from small residential developments to major industrial and commercial projects.

Mr. Bishop's experience covers a broad range of disciplines including environmental impact assessments (EIA), environmental planning and management services, master planning, land use studies and land development strategies. In addition to these services, Mr. Bishop is also experienced in regulatory and environmental permitting, remote island planning, and project management consulting. Mr. Bishop has extensive wildlife services, which include species management plans, threatened and endangered species surveys and preserve habitat design. Marine consulting capabilities include marine engineering, benthic surveys, marina and waterfront design and permitting, as well as dredge design and permitting.
